Week 6

- Gone through the various libraries shared with me for the Time Series Plots & Treemaps.
- Almost all of the rest libraries except dygraphs and metricsgraphics are for the visualization of grouped and categorical datasets only & hence not suitable for time series plotting. Compared dygraphs and metricsgraphics and found out that dygraphs is the most suitable one.
- Similar was the case for Treemaps where the libraries were for creating tree type folders/icon list & not for plotting treemaps.
- Tried different types of aesthetics as well as custom colours for the stock data graphs as well as series highlighting, etc.
